

### **Program-4**

**Description:**

Counts how many numbers from a predefined list are divisible by each integer from 1 to 9.

**How it works:**

- A list of numbers is given: [1, 2, 8, 9, 12, 46, 76, 82, 15, 20, 30].
- For each divisor from 1 to 9, it counts how many numbers are divisible.
- Stores results in a dictionary and prints it.

**Language Used:**

- Python
